ABOUT US

ST Blanks is a project built upon many years of research and development inside Latin America's biggest foam industry.

Our mission from the very beginning, in 2020, was to deliver to surfboard designers the highest quality they can get in the market at a fair price.

The mind behind this ambitious goal, our CEO Tino Stanley, worked all his life in the surf industry. After decades of leading the brand Stanley, whose creator was himself, Tino decided to pursue an old dream: developing surfboard blanks for athletes that wish for the highest level on their sport.

SAMUEL PUPO

Samuel Pupo, currently an athlete at the WSL Championship Tour, trusted ST Blanks and OHP Surfboards to provide the materials needed for high performance surfing.

Pupo, on his way to WSL CT, highlighted the importance of top-level blanks for his surfing skills, mainly aerial tricks.

His presence at this world stage has been crucial for our brand to gain awareness internationally.

EPS

BLANKS

EPS BLANKS

Our polystyrene blanks are available, currently, in 4 surfboard sizes:

6'1" x 20.5 x 2.75 - 41.5L

6'3" x 21 x 3 - 52.28L

6'8" x 23 x 3.45 - 73.20 L

7'10" x 24.12 x 3.50 - 90.42L

ST Blanks have developed an EPS blank that consists of very small cells, which results in a compact foam, a surfboard blank whose performance stands between a regular market EPS and a PU (polyurethane) blank. as described by our clients.

In order to prove our product compactness, here is our "Pin Test":

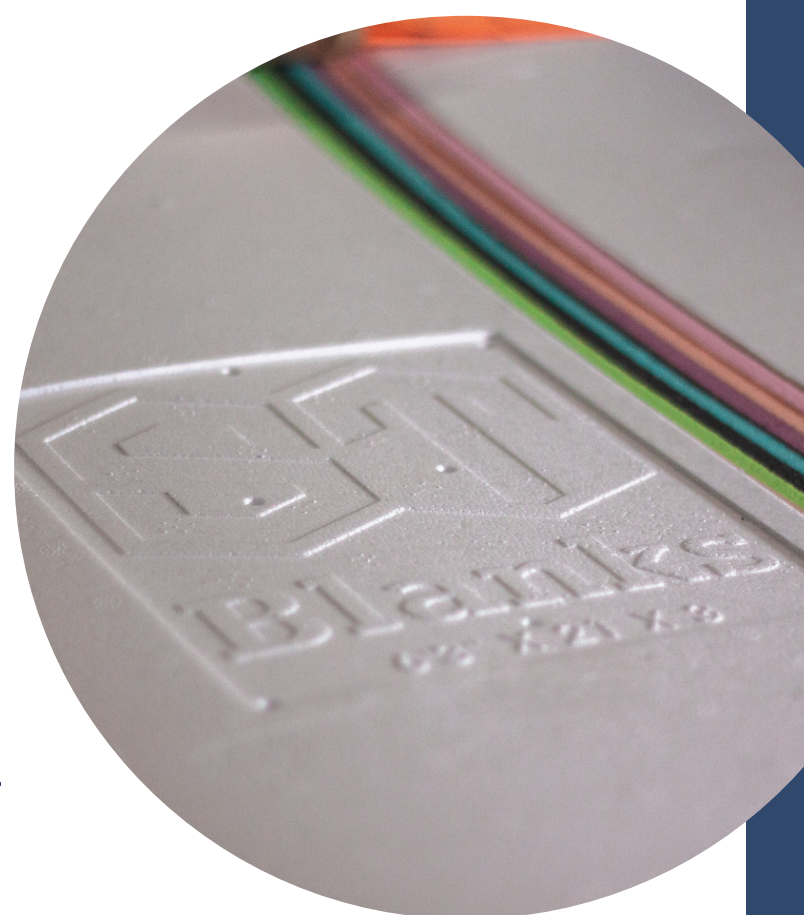

EPS BLANKS

Alongside the EPS blank itself, our R&D team created a big variety of stringers available for surfboard makers. The market's favorite is the one we named TechStringer.

TechStringer is a stringer made with high-density ($200\text{kg}/\text{m}^3$) polyurethane. It delivers resistance and flexibility to the surfboards.

On top of that, TechStringer is available in a almost infinite variety of colors and combinations between them, which gives the surfboard maker a wide range of design options.

For the ones who prefer the traditional way, ST Blanks also offers EPS Blanks made with wood stringers, and even two-parted blanks without stringers.

EPP

BLANKS

EPP BLANKS

The polypropylene blanks are a worldwide innovation brought to the market exclusively by ST Blanks.

This product was developed via Japanese technology, and it consists of a 100% sustainable and recyclable blank, with much more durability and resistance. We believe it to be the future of surfboards.

Our EPP blank has been tested and approved by Samuel Pupo, among other professional surfers, and has been used by Pupo at international competitions.

Technical information:

- Size: 6'2" x 21.1/4 x 2.3/4 - 42.5L
- 97% waterproof (laboratory tested)
- Anti-oxidation, anti-yellowness, anti-crumpleness

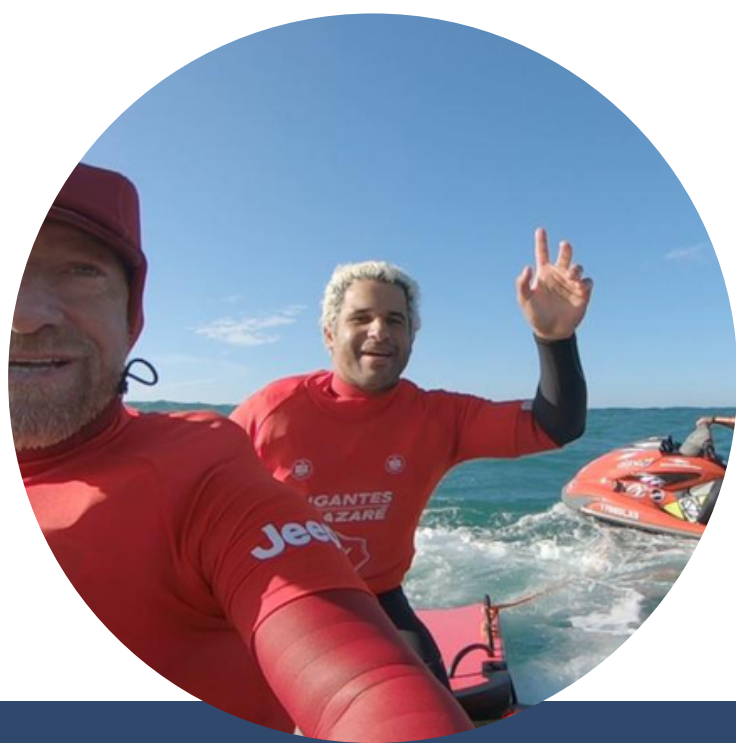

SLEDS

SURF RESCUE SLEDS

ST Blanks' Sled was developed upon the mission to deliver security and comfort to tow-in surfers around the world.

The sled is made of our polypropylene foam (EPP), which means it also has big durability and resistance, besides being 97% waterproof.

The product is currently used by top tow-in personalities, after being tested by Italo Ferreira and Alemão de Maresias at Nazaré, Portugal, our sled faced sinister seas such as Hawaii, with Carlos Burle, Indonesia, Maresias, among others.
